In this course, you will learn about the primary fields of engineering and explore the engineering design process, from conceptual design and optimal choice evaluation to prototyping and project construction. This introductory course focuses on specific engineering fields including Biomedical, Chemical, Civil, Electrical, Materials, and Mechanical Engineering.

Introduction to Engineering Design is a completely novel text covering the basic elements of engineering design for structural integrity. Some of the most important concepts that students must grasp are those relating to 'design thinking' and reasoning, and not just those that relate to simple theoretical and analytical approaches.

1.012 introduces students to the theory, tools, and techniques of engineering design and creative problem-solving, as well as design issues and practices in civil engineering. The course includes several design cases, with an emphasis on built facilities (e.g., buildings, bridges and roads). Project design explicitly concerns technical approaches as well as consideration of the existing built environment, natural environment, economic and social factors, and expected life span.
